

Executive DC[®] Envelopes

The Executive DC[®] "Die Cut" envelope was developed with the support of major U.S. and European-based inserting manufacturers. New, higher cycle speed inserters, tend to provide tighter material tolerances, making quality assurance more critical than ever. Bring the proven performance and outstanding quality of the Executive DC[®] into your production operation.

The Executive DC[®] was created to provide the ultimate envelope for both automated production mail and small office inserting operations in order to maximize application productivity and efficiency. Unique features include:

Lighter Weight Design

The Executive DC[®] envelope utilizes the least amount of paper per square inch than any other insertable envelope design. This may allow the customer to save on added postage or include an additional insert.

Seal Flap Construction

The Executive DC[®] envelope has a 2" rounded seal flap that falls within envelope specifications of any inserting equipment.

High Back Panel

All three back panels of the Executive DC[®] envelope meet together at the throat, secured by extra wide strips of seam adhesive. This combination offers strength and durability to the envelope for high speed inserting and mail processing.

Proven Results...Executive[®] Envelopes

Executive[®] brand envelopes have been providing great results since the early 1950's. They are known for providing outstanding quality, efficiency and uptime performance on major inserting applications and extracting equipment worldwide.

For additional information about Executive DC[®] envelopes, please contact National Imprint today at 1-800-683-3000.

- ▷ **Dry Packing**
Prevents tacking inside carton.
- ▷ **Diagonal Seam Construction**
Utilizes the best envelope design for high-speed inserting and extracting equipment.
- ▷ **Envelope Uniformity and Efficiency**
Maximizes inserter performance.
- ▷ **Edge-Tight Gumming**
Keeps inserts from catching during high-speed operations.
